4/17/2026
Option A

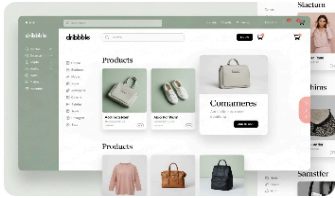

2. Project Overview

- This project is a one-page personal portfolio website to showcase my academic works, skills, and design interests. Its purpose is to present selected architectural projects and technical abilities in a clear, organized, and visually appealing format. The website also serves as a professional tool for applying to internships, collaborations, and academic presentations. It is intended for architecture professors, potential employers, design professionals, and peers who are interested in my work and development in the field.

3. Initial Prompt

- “Create a one-page personal portfolio website with sections: Home, About Me, Skills, Projects, Contact. Use a clean modern design with a pastel pink and green color scheme. Make it responsive.”
- Generated Output:

Residential Architecture

Modern Tropical House Design

A 2-story residential project with wide overhangs, natural ventilation, and modern aesthetics. The design embraces passive cooling strategies and integrates lush greenery into the living spaces, celebrating the richness of tropical architecture.

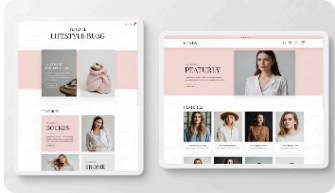

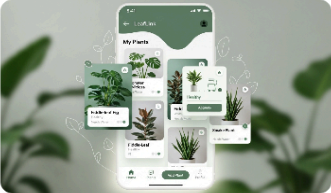

[Project Overview](#) [Design Process](#) [Architectural Details](#) [Construction](#)

Public Infrastructure

Airport Terminal Concept

A forward-thinking airport terminal concept focused on efficient circulation, seating, and tropical landscape integration. The design prioritizes passenger experience with open, naturally lit spaces and seamless indoor-outdoor transitions.

Urban Development

Urban Planning Study – Davao City

A development proposal focused on accessibility and sustainable growth in Davao City. The study explores mixed-use zoning, green corridors, and climate-responsive urban design strategies for a more livable, resilient city.

Design & Build

ABOUT ME

Designing spaces that breathe and inspire.

I am an architecture student with a strong interest in modern tropical design, sustainable architecture, and spatial planning. My work focuses on creating environments that are both functional and aesthetically meaningful, especially in warm, humid climates like the Philippines.

I enjoy exploring design concepts through digital rendering, layout planning, and creative problem-solving. Every project is an opportunity to blend nature, culture, and technology into spaces that genuinely serve the people who inhabit them.

Let's collaborate on something meaningful. —

SELECTED WORKS

Spaces with purpose.

Architecture projects exploring tropical design, sustainability, and human-centered spaces.

Residential Architecture

4. 2 Refinement Prompts

- “Refine the website to better reflect an architecture portfolio aesthetic. Use a more sophisticated modern tropical style with improved color harmony (warm neutrals, soft greens, and light wood tones). Enhance typography with a more elegant font pairing. Improve the Projects section by making each project card larger, with image overlays, subtle hover zoom effects, and cleaner alignment. Add more white space and a grid-based layout for a more professional and architectural presentation. Enhance the user experience and functionality of the portfolio. Add a sticky navigation bar with active section highlighting.”
- “Include smooth scrolling and section transitions. Add a ‘Download CV’ button in the hero section. Improve the Contact section by adding a simple contact form (name, email, message). Ensure all sections are fully responsive and optimized for mobile devices. Add subtle scroll animations (fade-in or slide-up) for each section.”

ARCHITECTURE PORTFOLIO

Kiara Michelle Lupiba.

Architecture Student — Aspiring Designer

Designing thoughtful, functional, and visually compelling spaces inspired by tropical architecture and modern design principles.

COMMERCIAL ARCHITECTURE

01

2-Storey Commercial Building

A contemporary 2-storey commercial building design featuring exposed stone cladding, bold black steel frames, and expansive glazed facades. The project prioritizes open commercial spaces on both floors, generous ceiling heights, and seamless indoor-outdoor connectivity through wide covered walkways.

6. Reflection:

- The initial prompt worked well in generating a complete and structured one-page portfolio website with all the required sections such as Home, About, Skills, Projects, and Contact. The layout was already organized and visually coherent, making it easy to present my work. The design elements like spacing, typography, and section division were effectively generated, creating a clean and professional appearance. Additionally, the AI was able to produce a responsive layout that adapts to different screen sizes, which is an important feature for modern web design.

- Some elements required manual refinement, particularly in adjusting images, alignment, and spacing to better match my portfolio aesthetic. Certain sections, like the Projects area, needed improvement in terms of visual hierarchy and presentation to make them more engaging and realistic. There were also minor issues with responsiveness and styling consistency that required additional prompting or direct code edits. Additionally, replacing placeholder images and customizing content to better reflect my actual work required manual input.
- I learned that the quality of the output depends on how clear and detailed the prompt is. Giving specific instructions about the design, layout, and features helps produce better results. I also realized that the first output is usually just a starting point and needs improvement through additional prompts. Overall, prompting is a step-by-step process where refining the output leads to a more polished final website.
